                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence encodes the phytoene synthetase from Nicotiana tabacum. The phytoene synthetase coding sequence represents a cDNA of the invention. The isolated nucleic acid molecules are used for producing recombinant polypeptides or transgenic plants with enhanced ability to synthesise carotenoids. Phytoene has been used as ultra violet absorber and other carotenoids have been used as food colours, animal feeds and in the pharmaceutical and cosmetics industries.

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antigonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone and ovarian cancer and other cancers of the adrenal gland, bone, bone and ovarian cancer and other cancers of the adrenal gland, bone, bone and ovarian cancer and other cancers of the adrenal gland, bone, bone and user and sorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune colitis; (c) cardiovascular olisorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal on the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. the proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade.

110 degrees centigrade.

120 degrees centigrade.

131 degrees destigrade.

142 degrees sequences as shown in AAB99132-AAB99143, which AAH75903-AAH75920 and AAG66436.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expressed sequence tag. AAA41261 to AAA43419 represent specifically claimed secreted expressed sequence tags (8ESTs), isolated from humen, mouse, xenopus and rat issues sources. The segre an have a range of activities depending on the Lissues they were isolated from. The activities depending on the Lissues they were isolated from. The activities include: chemokinetic; analgasic; hemostatic; thrombolytic; antifidations in the activities include: chemokinetic; antibacterial; antifidingal; antifivital; antifidabetic; antiparkinsonian; antificatic; antiparkinsonian; antiparkinsonian; antiparkinsonian; antiparcial cerebroprotective; anticonvulsant; and antidepressant. The sESTs can be used for gene introduction and isolation of full-length copyas and genomic DNA molecules which correspond to the sESTs. Proteins encoded by the sESTs are useful in assays for determining biological activity and ralising are useful; in assays for determining biological activity and ralising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (altheimer's, parkinson's, Huntington's disease, stroke), coagulation disease), tumours, bacterial, fungal or viral infections, depression and slasses), tumours, bacterial, fungal or viral infections, depression and seases). AAA4420 to AAA4420 repressent linker variants which are given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated polynucleotides, and encoded proteins, comprising secreted expenses expressed sequence tags (sESTs), useful for treating various disorders such as autofamune, infectious, and central nervous system disorders

AA265250 to AA265350 represent 97 isolated human secreted protein genes.
This sequence was found to be present on human chromosome 1.

AAY76124 to AAY7623 represent the secreted proteins encoded by the 97 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions.

C. 9. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the mount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 97 genes, based on which tissues they are most highly expressed in, and include developmental abnormalities and foctal deficiencies, blood disorders, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, atherosclerosis, diabetes, cardiovascular disorders, skin disorders, atherosclerosis, diabetes, cardiovascular disorders, xidney disorders, atherosclerosis, diabetes, cardiovascular disorders, xidney disorders, atherosclerosis, diabetes, cardiovascular disorders, xidney disorders, and seedul for identifying their binding partners.

The sequences shown in AAY76224 to AAY76424 represent fragments of the

```
The DNA (AAT07301) encoding the mature form of a collagenolytic type matrix metalloprofeease (MMP-1) (AAR87016) was isolated and adapted for expression in plants by addition of a start codon and a patatin leader sequence. The MMP construct (PAT COL) in vector Bin 19 was used to transform Agrobacterium GV 2260 and introduced into potato cv. Desiree and Maris Piper plants. The transgence plants showed high levels of resistance to the nematode Globodera pallida.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid for increasing plant resistance to nematodes - encodes a polypeptide with collagenase activity.

                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drungs. The invention discloses genomic DNA sequences (ABLIGITS-ABL30511), expressed DNA sequences (ABL16175-ABL30511),
                                                                                                                                                                                                                                                                                                                                                                                                                                                      (ABB57737-ABB72072). This patent did not form part of the printed the specification, but was obtained in electronic format directly from WIPO at ftp.wlpo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            OXRD-2; human; oxidoreductase; cell proliferation; neurological disease; amooth muscle disease; autoimmune disease; inflammation; antiproliferative; neuroprotective; immunosuppressive; antiinflammatory; gene therapy; diagnosis; ss.

The present sequence is that of Incyte clone 1666030CB1 encoding human oxidoreductase OXRD-2 (see AAB19927). The gene maps to chromosome I between 278.8 and 292.7 or. The clone was isolated from human breast tissue colbA library BRSTMOTO9. The encoded protein shows homology to Plasmodium falciparum FAD-dependent oxidoreductase. OXRD-2 is expressed in nervous, reproductive and gastrointestinal tissue, and may be involved in cell proliferation and inflammation. The invention provides Norly proliferation of cast AAB1926-33) and polynucleotides (see AAB1926-92). It also provides methods for using these polypeptides and polynucleotides (see AAB19926-92). It also provides methods for using these polypeptides and polynucleotides associated with expression of OXRD, especially call proliferative, neurological, genetic, smooth muscle, and autoimmune/inflammatory disorders. A vector encoding OXRD or its fragments is useful for sometic or germine gene therapy for treating such disorders. The polynucleotides may also be used to monitor regulation of OXRD incledides and disorders. The prolectides and proper intervention. A DNA fragment comprising nucleotides 173-217 of the present sequence can be used as a hybridization probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention i useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIO1840-ABLIG175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed at fite.wipo.int/pub/published_pct_sequences.
detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                       Claim 1; SEQ ID NO 41747; 21pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                        The invention relates to primers for synthesising full length CDNA closes. 830 cDNA molecules encoding a human protest have been isolated and nuclectide sequences of 5'- and 3'-ends of the CDNA molecules have been determined. Primers for synthesising the full length CDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length constructed cDNA libraries that were synthesised by the Oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                             830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostafic; hepatotropic; vulnerary; antipactatic; anticonvulsant; antiarthritic; immunosuppressant; coteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; antidiabetic; hypotensive; deradiont; thrombolytic; coaquiant; vasotropic; antidiabetic; hypotensive; deradiont; antidiabetic; hypotensive; deradiont; antidiapetic; hypotensive; deradiont; coaquiant; vasotropic; antidiamatory; antibacterial; antivitary; antifinetumatic; antidiapetic; hypotensive; deradiont; descriptions associated with an ORFX associated disorder. The proteins and antianaemic which and open therapy vectors. The proteins associated with an ORFX associated disorder; vactors: The proteins and nucleic acids may be used to treat cancers, outled acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, cafer vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus corpusation, hypothyroidism, cholesterol esters storage, systemic lupus antergies, aplastic namenals, burns, wounds, bone and cartilage damage, cocurnal haemoglobinuria, antidiflammatory disease; to enhance conturned the conturned as a contraceptive.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an ollogouchedetide complementary complementary primer and an ollogouchedetide complementary of the 5602 nucleotide sequences defined in the specification, where the collogoucleotide comprises at least 15 nucleotides; or (b) a combination of an ollogoucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence and an ollogoucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the ollogoucleotide which comprises a 3'-end sequence is allogoucleotides of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in suttaense therapy and can gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are useful for synthesising polynucleotides, and agnosts of the abnormality of the full-length cDNAs. The primers also useful for the convas easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 represent human annino acid sequences; and AAH13629 to AAH13632 represent human annino acid sequences; and AAH13639 to AAH13632 represent human annino acid sequences; and AAH13639 to AAH13632 represent human annino acid sequences; and AAH13639 to AAH13632 represent human annino acid sequences; and AAH13639 to AAH13631 processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ds.

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0167-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB97137-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                   Claim 1; SEQ ID NO 14401; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3158 BP; 875 A; 749 C; 697 G; 837 T; 0 other;

sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
sarbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center code: WIBR

The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the configs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Web site: http://www-seq.wi.mit.edu

It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is rubitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will.

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as its available and the accession number will be preserved.

On Feb 4, 2002 this sequence version replaced gi:15963645.

Sequence Quality has been annotated with sequence quality
estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
I error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are evaliable as part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACUB/365 192974 bp DNA linear PRI 04-FEB-2002 Homo saplens chromosome 16 clone RP11-53L24, complete sequence. This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
